

Why choose gate hardware by D&D Technologies?

You can depend on quality, performance, reliability, support and value when you use D&D's Hi-Performance Gate Hardware.

D&D Technologies' products are made from advanced engineering polymers with stainless steel components. They are designed to last a lifetime, and D&D backs that quality with a limited Lifetime Warranty.

D&D's gate hardware represents quality and value to the contractor and the consumer!

ADJUSTABILITY is a key feature built in to every D&D product. Gates will naturally fall out of alignment over time due to ground settling or children "riding" the gate. The ability to easily make adjustments (self closing tension, vertical and horizontal) is critical for effective gate latching.

D&D product key features:

- Adjustable (during and after installation)
- Quick & easy to install
- No welding or special tools required
- Super-strong engineering polymer construction with stainless steel components
- Models for wood, vinyl, metal & chain link
- Most products also available in white
- All models fit left-hand, right-hand, inswing or outswing gates
